I. Introduction

Novant Health UVA Health System Haymarket Medical Center, in partnership with the Community Healthcare Coalition of Greater Prince William conducted a community health needs assessment in 2016 to identify the most pressing health needs in our community. The assessment is designed to identify the health needs of the most vulnerable populations in the community. Novant Health UVA Health System Haymarket Medical Center will enhance the community's health by offering health and wellness programming, clinical services and financial support in response to the specific health needs identified.

a. Organization Overview

Novant Health UVA Health System Haymarket Medical Center is an integral part of the Novant Health system (collectively known as "Novant Health"). Novant Health is a non-profit integrated health care system of 14 medical centers and a medical group with over 500 clinic locations. Other facilities and programs include outpatient surgery and diagnostic centers, charitable foundations, rehabilitation programs, and community health outreach programs. Novant Health and its affiliates serve their communities with programs including health education, home health care, prenatal clinics, community clinics and immunization services. Novant Health's over 25,000 employees and physician partners care for patients and communities in North Carolina, Virginia, South Carolina and Georgia.

Mission

Novant Health exists to improve the health of our communities, one person at a time.

Our employees and physician partners strive every day to bring our mission, vision and values to life. We demonstrate this commitment to our patients in many different ways. Our organization:

- Maintains an active community health outreach program.
- Demonstrates superior outcomes for many health conditions as indicated by our state and national quality scores.
- Creates innovative programs that address important health issues, with many of our programs and services being recognized nationally.
- Believes in its role as a good corporate citizen, working with community agencies and organizations to make our communities better places to live and work.

Novant Health UVA Health System Haymarket Medical Center opened in 2014 as a 60-bed community facility providing residents in the Haymarket area with inpatient and outpatient services. Haymarket Medical center proudly serves the growing and diverse northern Virginia community to provide remarkable care for the entire family through an integrated network of inpatient and outpatient services and programs.

b. Our Community

Primary and Secondary Service Areas

The Primary Service Area for Novant Health UVA Health System Haymarket Medical Center is defined by the zip codes that represent 75% to 85% of the hospital's in-patient population as outlined below:

Zip Code	City	County/Jurisdiction
20137	Broad Run	Fauquier
20143	Catharpin	Prince William
20155	Gainesville	Prince William
20156	Gainesville	Prince William
20168	Haymarket	Prince William
20169	Haymarket	Prince William
20198	The Plains	Fauquier
20152	Chantilly	Loudoun
20167	Sterling	Loudoun
20107	Arcola	Loudoun

The primary service area includes Prince William and parts of Fauquier and Loudoun Counties, Virginia. Based on 2014 estimates, Prince William County remained the second-most populous county in the State of Virginia with just over 446,000 residents¹. Fauquier County has an estimated population of just over 68,200 residents² and Loudoun County had a population of just over 363,000 residents.³ Prince William, Fauquier, and Loudoun Counties had a population growth of 11.0%, 4.6%, and 16.2% respectively, since the 2010 US Census.

According to the 2014 U.S. Census estimates, the aforementioned counties include the following demographic profiles:

¹ U.S. Census Bureau (2015). State & County QuickFacts. <http://quickfacts.census.gov/qfd/states/51/51153.html>

² U.S. Census Bureau (2015) State & County QuickFacts. <http://quickfacts.census.gov/qfd/states/51/51061.html>

³ U.S. Census Bureau (2015) State & County QuickFacts. <http://quickfacts.census.gov/qfd/states/51/51107.html>

Population Estimates

Detailed Population Data

Detailed demographic data for Prince William, Fauquier and Loudoun County is outlined below:

Prince William, Fauquier & Loudoun County Population By Race & Ethnicity (2014)

	Prince William County	Fauquier County	Loudoun County	Virginia
Population Estimate	446,094	68,248	363,050	8,326,289
Persons Under 5 Years, percent 2014	7.9%	5.6%	7.7%	6.2%
Persons Under 18 Years, percent 2014	28.1%	23.9%	29.4%	22.4%
Person 65 Years & Over, percent 2014	8.3%	14.9%	7.9%	13.8%
Female Persons, percent 2014	50.2%	50.5%	50.4%	50.8%
White Alone, percent 2014	64.4%	87.3%	70.7%	70.5%
Black/African-American Alone, percent 2014	21.5%	8.2%	7.8%	19.7%
American Indian & Alaska Native Alone, percent 2014	1.1%	0.5%	0.5%	0.5%
Asian Alone, percent 2014	8.4%	1.5%	17.3%	6.3%
Native Hawaiian & Other Pacific Islander Alone, percent 2014	0.2%	0.1%	0.1%	0.1%
Two or More Races, percent 2014	4.4%	2.4%	3.5%	2.8%
Hispanic or Latino, percent 2014	22.0%	7.2%	13.4%	8.9%

Source: U.S. Census Bureau (2014).

Estimates reflect that children and adolescents make up over one-third (36.0%) of the population in Prince William County, just under one-third (29.5%) of the population in Fauquier County, and over one-

third (37.1%) of the population in Loudoun County. The senior populations in these counties make up 8.3%, 14.9% and 7.9% of the population, respectively. Since 2010, all three counties have experienced steady population growth, with Loudoun County experiencing the highest rate of population growth (16.2% since 2010). Non-white minorities currently make up over one-third (35.6%) of the racial demographic in Prince William County, less than a quarter (12.7%) of the racial demographic in Fauquier County, and roughly one-quarter (21.5%) in Loudoun County.

Residents in all three counties earn a median income that is higher than the Virginia state average, and they are considered three of the highest income counties in the United States.⁴ A key indicator to evaluate economic condition is the poverty rate. The poverty rate for both Prince William County and Fauquier County residents is approximately half the rate of the Virginia state average (6.3% and 5.6%, respectively) and the poverty rate in Loudoun County is approximately one-third (3.6%) of the Virginia state average.

Median Household Income		Population Educational Attainment & Poverty Level (Population 18 to 24 years)				
			Prince William County	Fauquier County	Loudoun County	Virginia
Prince William County	\$98,071	< HS diploma/GED	10.9%	9.4%	17.2%	12.5%
Fauquier County	\$88,409	HS diploma/GED	89.1%	35.3%	25.4%	87.5%
Loudoun County	\$122,238	Bachelor's degree	38.1%	11.9%	39.8%	35.2%
Virginia	\$63,907	Persons below poverty level, percent (2009-2013)	6.3%	5.6%	3.6%	11.3%

II. Assessment

The following are excerpts and findings from the 2016 Community Healthcare Coalition of Greater Prince William (CHCGPW) Needs Assessment. To access the full report, please visit <http://www.vdh.virginia.gov/>.

a) Collaborative community partners

The 2016 CDCGPW Greater Prince William Area Community Health Needs Assessment was a collaborative effort of the member agencies of the CDCGPW. For a list of coalition members, please see Appendix A. As part of this assessment process, special attention was paid to the needs of the underserved. The process emphasized collaboration among community partners to improve the overall health of the community.

⁴ U.S. Census Bureau, 2014 American Community Survey. http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_14_5YR_B19001&prodType=table

The assessment process was initiated by the CDCGPW partner organizations. Novant Health UVA Health System Haymarket Medical Center and Sentara Healthcare were jointly involved as collaborative partners in the process. To ensure input from public health professionals, leaders of medically underserved communities, and persons with broad knowledge of the community, invitations were distributed to a large number of individuals and community groups. The CDCGPW team worked collaboratively to support the assessment process. (See Appendix A for a complete list of agencies that were represented on the CDCGPW. Please see the CDCGPW 2016 CHNA Report at <http://www.vdh.virginia.gov/> for a listing of individual participant names).

b) Solicitation

We solicited input from persons who represent the broad interest of the Prince William Health District (PWHD) – which includes Prince William County, Manassas (city) and Manassas Park – and Culpeper, Fauquier and Loudoun Counties. Such persons who represent the broad interest of these communities include Hispanics, persons living in poverty and those without a high school degree. A targeted distribution of paper surveys was utilized in an effort to reach areas of the population that may not have been able to access the online survey. Paper copies were distributed at community events and to community groups where a diverse population is served. Through both online and paper surveys, participants surveyed similarly represented the communities represented in the Prince William Health District, Culpeper, Fauquier and Loudoun Counties. Areas identified as gaps in the quantitative data sampling included an underrepresentation in males.

c) Data collection and analysis

Primary Data

The Community Health Needs Assessment Health Check Survey

With guidance from the CHCGPW, a community health check survey for residents from the Prince William Health District, Culpeper, Fauquier and Loudoun Counties was created. The CHNA Health Check Survey was made available to community residents from March 29, 2016 to May 1, 2016. Surveys were administered online and in paper copy, both provided in both English and Spanish. Paper surveys were made available at local community events, at partner locations, through media outlets, at health fairs and to local community groups representing the medically underserved to ensure that participants surveyed represented the medically underserved, uninsured, low-income and minority populations. Participants surveyed similarly represented the PWHD, Culpeper, Fauquier and Loudon Counties:

- 81% female; 19% male
- 9% ages 65+
- 25.83% identified as Hispanic/Latino; 17.31% identified as African-American or Black; 4.81% identified as Asian
- 7.68% less than high school graduate; 27.27% high school diploma or GED; 12.93% associate's degree, 24.71% college degree; 27.40% graduate degree

Areas identified as gaps in the quantitative data sampling included an underrepresentation of males.

Secondary Data

Along with the outlined primary data, secondary data was collected from other sources and reviewed. Health data was gathered and analyzed from the following sources:

- Virginia Department of Health Division of Health Statistics
- US Census Bureau

III. Identification and Prioritization of Health Needs

a) Identified Significant Health Needs

From participant responses, it was apparent that behavioral risk factors, access to care and substance abuse were the most important concerns of community residents. Other key data points included:

- When asked to identify the greatest public health concerns, respondents identified the top 10 health concerns as the following: 1) cost of healthcare, 2) drug use/abuse, 3) obesity, 4) mental health issues, 5) distracted driving, 6) access to healthy foods, 7) availability of health care, 8) lack of exercise, 9) alcohol use/abuse, and 10) dental care.
- Regarding personal health responses, 85.2% reported their health was good to excellent; 75% reported seeing a primary care provider within the past year; 72% reported having a preventive health service within the past year.
- Regarding access to care, 80% reported that they strongly agree or agree that they are able to get the healthcare that they need (29% and 51%, respectively); 31% strongly agree or agree that they must travel outside of their community for healthcare (8% and 23%, respectively), while 58% strongly disagree or disagree that they must travel outside of their community for healthcare.

b) Prioritization

In May and June 2016, two community town hall meetings were held to present survey results and ask community members and stakeholders to rank the top three health issues according to magnitude of these issues and years of potential life lost. The outcomes from the priority focus exercises were combined with the following results:

- 1) Access to healthy foods
- 2) Alcohol use/abuse
- 3) Availability of healthcare
- 4) Cost of healthcare
- 5) Dental care
- 6) Distracted driving
- 7) Drug use/abuse
- 8) Lack of exercise
- 9) Mental health issues
- 10) Obesity

Recommended Prioritized Health Outcomes

For each of the identified areas, recommendations were made for the top prioritized health needs. Below is a summary of those recommendations:

- *Mental health issues:* Increase programming addressing mental health and coordinate efforts through community agencies.
- *Cost of Healthcare:* Identify key partnerships through the healthcare coalition and other agencies to address healthcare costs and create innovative approaches that would assist in lowering the cost of healthcare services.
- *Alcohol and Other Drug Use/Abuse:* Integrate substance abuse screenings and treatments into a primary care setting, carefully collaborate between providers, case managers, behavioral health consultants and mental health specialists to help educate, improve mental health, patient engagement and reduce drug and alcohol use.
- *Dental Care:* Provide services and programming related to making dental care more widely available throughout the community to those in need. Work with local dentists to provide more community outreach.

Facility prioritization

In addition to the community rankings, Novant Health UVA Health System Haymarket Medical Center reviewed the top five diagnosis codes for inpatient and outpatient hospital emergency room visits at Novant Health UVA Health System Prince William Medical Center* year-to-date January to July 2015.

Novant Health UVA Health System Prince William Medical Center Emergency Department
Top 5 Diagnoses YTD Jan-July 2015

Inpatient		Outpatient	
Diagnosis	Volume	Diagnosis	Volume
Urinary tract infection NOS	28	Otitis media NOS	515
Chest pain NEC	13	Chest pain NEC	471
Noninf gastroenterit NEC	10	Abdmnal pain unspcf site	454
Chest pain NOS	7	Urinary tract infection NOS	452
Acute pharyngitis	3	Noninf gastroenterit NEC	451

**Due to a lack of available data from Novant Health UVA Health System Haymarket Medical Center operational dates, ED Utilization data from Novant Health UVA Health System Prince William Medical Center was used*

A review of the hospital emergency room visits indicated that many of the top inpatient diagnosis codes are correlated with chronic issues that typically affect the aging population and also symptoms related to heart disease. Upon analysis of the outpatient diagnosis codes, it was apparent that many of the patients seen had symptoms that could be related to a number of chronic conditions, including (but not limited to) chronic sinus, heart disease, obesity, diabetes and other chronic issues related to aging.

Upon a comprehensive review of the community’s recommended prioritized outcomes and NHPWMC’s ED top 5 diagnosis codes, the Novant Health UVA Health System Haymarket Medical Center leadership team and Board of Trustees evaluated this information based on the scope, severity, health disparities associated with the need, and the estimated feasibility and effectiveness of possible interventions. Through this thorough evaluation, the team agreed on the following five top significant health priorities for Novant Health UVA Health System Haymarket Medical Center:

1. Diabetes
2. Obesity
3. Other Chronic Diseases, including heart disease, cancer and stroke
4. Mental health, including substance use and abuse

IV. Addressing needs

Novant Health UVA Health System Haymarket Medical Center is committed to working to address each of the identified areas of need through resource allocation and support of the following programs:

Diabetes:

- Diabetes (A1C) community screenings
- Diabetes prevention classes
- Diabetes education

Obesity:

- BMI screening
- Community education

Other Chronic Diseases:

- Cancer education
- Mammography screenings
- Community health education
- Heart health screenings

Mental Health:

- Community awareness campaign
- Community education programs

In addition to the programs and services offered to the community through Novant Health UVA Health System Haymarket Medical Center, there are several existing community assets available throughout the Prince William Health District, Fauquier and Loudoun Counties that have additional programs and resources tailored to meet all of the identified health needs. The following is a list of those existing community assets:

Health Needs	Local Community Resources Addressing Needs
<ul style="list-style-type: none"> • Access to healthy foods • Availability of healthcare • Cost of healthcare • Dental care 	<ul style="list-style-type: none"> • Manassas Midwifery • Novant Health UVA Health System Haymarket Medical Center • Novant Health UVA Health System Prince William Medical Center

V. Impact Evaluation of 2013-2015 Community Health Needs Assessment

Based on the previously reported health data from the 2014-2015 Community Health Needs Assessment, the Novant Health Northern Virginia Board of Trustees did a collective review of community feedback and prioritization, and determined the top health priorities for Novant Health UVA Health System Haymarket Medical Center as the following: **Diabetes and Obesity.**

To address these priorities, Haymarket Medical Center committed to providing community education and screenings to address these needs. From 2014-2015, Novant Health UVA Health System Haymarket Medical Center was successful in implementing selected outreach programs for each of the defined priority areas while meeting the goals established for each program. The major program goal that was set for each priority area was to increase the number of community members reached through screenings and health education. All goals were met for each priority area. Specific objectives and measures achieved are described below:

1. Priority Area: Diabetes— 70 community members were reached through screenings that included A1C exams to measure one’s risk for diabetes. In addition, over 194 community members received health education specific to diabetes management and prevention, as well as heart health. Screenings and educational classes were made available in the community at community centers, senior centers, Churches, and at local community events as requested.
2. Priority Area: Obesity – Over 370 community members received health education specific to nutrition, lifestyle education and weight management.
